

# Creepy Crawly Scavenger Hunt

Kruckeberg  
Botanic Garden

Take a walk around your backyard, neighborhood, or local park to look for these bugs, insects, and other creepy crawlies!

Slug

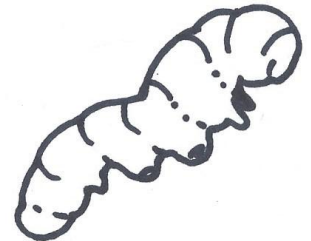

Slugs make slime trails, which helps them move and even hang upside down!

Ant

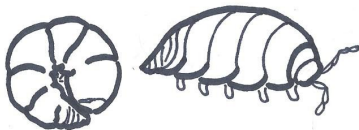

Ants live and work together in large groups called colonies.

Caterpillar

Caterpillars grow up to become butterflies!

Pill Bugs

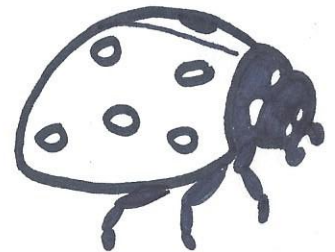

Pill bugs have hard shells and can roll into a ball to protect themselves.

Butterfly

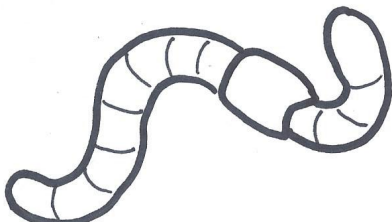

Butterflies are garden pollinators!

Ladybug

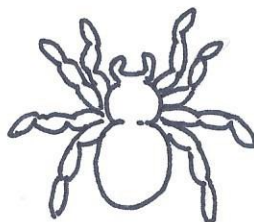

Ladybugs eat aphids and other garden pests.

Earthworm

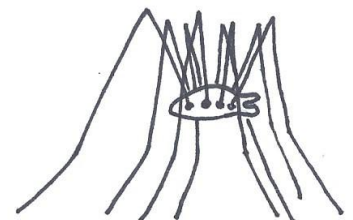

Earthworms eat dead leaves, compost, and even decaying animal bodies, turning it all into new, healthy soil

Spiders

Spiders catch and eat garden pests in their spider webs.

Daddy Long Legs

Although they have eight legs, Daddy Long Legs are not true spiders.
